

## Wiring diagram for the Glow in the Dark Spider

Blue drawing is a Head Pin.  
Orange lines are wire.

Twist the four 8" wires together tightly at the center and wrap once around the wire just below the head as shown. Push the body onto the head pin, pressing hard against the wires, pushing them up tightly against the head as shown. Form a loop on the end. Secure with a drop of super glue.

Loop to  
secure end  
of head pin.

Thread the seed beads, bicone bead and tube beads onto each wire as shown in the diagram below. The tube beads can be any length desired. The longer the tube, the longer the leg.

To hold the beads on the wire, form a loop at the end of the wire next to the last seed bead, cut off excess.

Optional: thread the wire back through the last seed bead and back up through the tube bead. Pull tightly, cut off excess wire.
